Accelerators for a Stronger and More Resilient Nation

The Heavy Ion Accelerator Symposia (HIAS) series has been organised at the ANU since 2012, and we look forward to bringing you its 8th edition in 2024. It is hosted by the Department of Nuclear Physics and Accelerator Applications at the Research School of Physics together with the Heavy Ion Accelerators ([HIA](#)) project funded through the Australian Government's National Collaborative Research Infrastructure Strategy ([NCRIS](#)).

The event will bring together researchers working with accelerated ion beams and related state-of-the-art instrumentation, as well as industry partners and policy makers. The Symposium will provide a forum to build cross-institutional and cross-disciplinary links and reflect on the ways our research community can support the national priorities, such as building climate and environmental resilience, as well as the fast-growing Australian industries of quantum computing and space.

Information about the Symposium, including abstract submission, key dates and registration fees will be available on the conference webpage <https://hias.anu.edu.au> from the end of May.

Please direct your questions about the scientific content of the program, expressions of interest to be a speaker or any other enquiries to hia.admin@anu.edu.au.
